

When the inside faces of the oven are treated with Fujihokka, the Fujihokka lining absorbs thermal energy very quickly and then starts to radiate it back into the oven as high quality far infra red radiation which is readily absorbed by most materials.

Fujihokka-lined oven

During the process cycle Fujihokka responds immediately to any temperature drop in the oven by radiating thermal energy back into the oven.

In practice this means that less energy is required to maintain the set oven temperature
